1. Introduction

Dear Customer,

Thank you for purchasing the Pacific Sun Power Plug.

With the purchase of this device, you have selected a top quality product. It has been specifically designed for aquaristic purposes and has been tested by experts. With this device, you are able to control and monitor power for your aquarium devices plugged into this Power Plug.

For best results, please read through this instruction manual before installing the Power Plug on your system.

During or after installation, please do not hesitate to contact our technical support team at service@pacific-sun.eu if you have any questions about your new Power Plug.

2. Power Plug Information and Features

2.1. Device Features

Power Plug is a manageable (wireless controlled) power socket. You can use it to control any devices: lamps, heaters, skimmers based on set parameters.

One of the use cases can be for example:

- when the temperature in the aquarium rises above the allowable - can turn on the aquarium cooler.
- in cooperation with an optical sensor (connected to Kore 5th/7th) - can protect the skimmer against overflow.

The Power module can coexist with other Pacific Sun devices added to the PS Cloud ecosystem. In the case of setting "Rules" – when Kore 7th works with the kHLab module (depending on the set water hardness) it can turn ON or OFF the Calcium Reactor effluent dosing (control pump which is dosing aquarium water to the Calcium Reactor).

Power Plug is equipped with a module measuring the current and voltage consumed by the connected device.

You can also use it to control the correct operation of the devices (clogged circulation pump, skimmer pump, etc.).

Power Plug is easily and transparently managed via the application (accessible from any browser – including e.g.: SMART TVs).

This device has a built-in scheduler allowing to program ON/OFF functions for each day of the week such as controlling an algae reactor.

2.2. Technical Specifications

- Input voltage: 100-240V
- Maximum rated current: **10A (2300W)**

3. Power Plug - Smart Power Switch

3.1. Adding Power Plug to Pacific Sun Cloud

1 Don't have an account yet? Create an account

1
Connect to **your home Wi-Fi Internet network**, open Internet Browser, and go to the following address:

<https://cloud.pacific-sun.eu>

1 Click **Create an account**

Note:

If you already have PS account and Added a new tank - **skip this step and go to step nr 6**

1 Email
2 Password
3 Password Again
4 Submit

2
Create **Cloud Pacific Sun account**.

1 Enter **Email** address

2 Enter **Password**

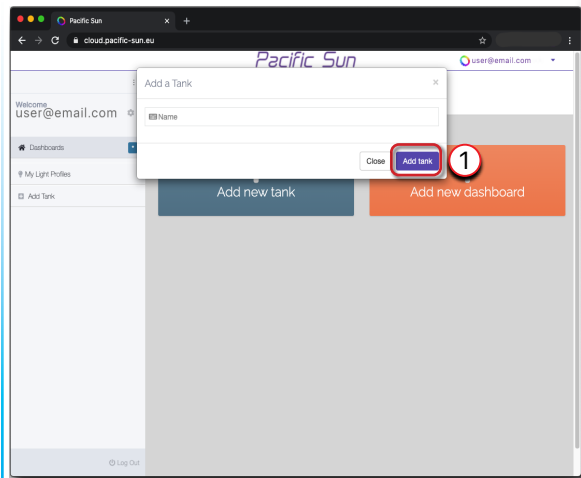

3 Enter **Password Again**

4 Next Click **Submit**

1 Add new tank

3
After login, on the **Dashboards**:

1 Click **Add new tank**

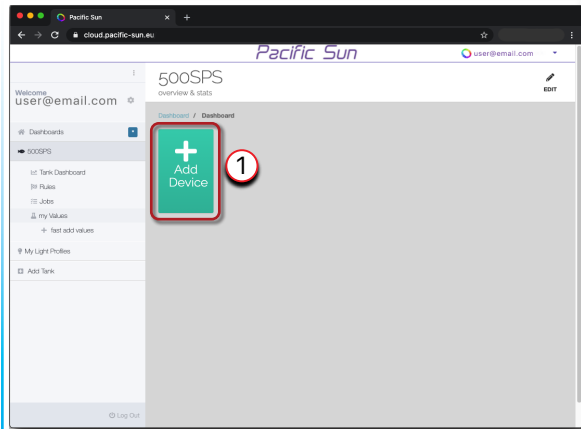

4

Add a Tank:

Type in your preferred **Name**

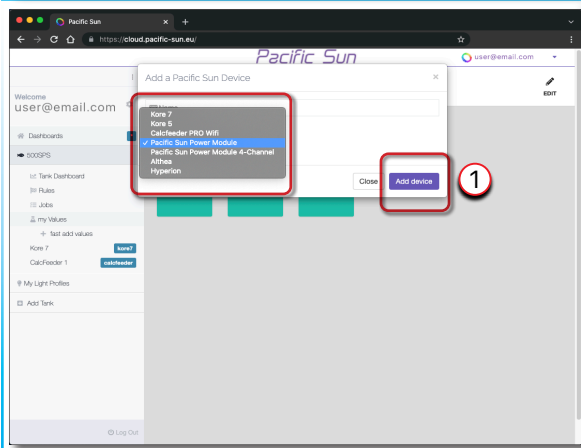

1 Click **Add tank**

5

Under your tank Name:

1 Click **Add Device**

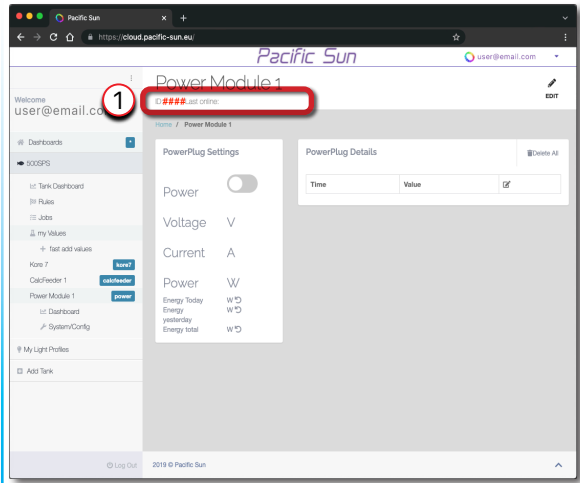

6

Type In your preferred Name and select the device from the list:

Pacific Sun Power Module

1 Click **Add Device**

7

Under your Power Module Name Note you **ID device number**:

1 ID: #####

8

Connect **Power Plug** to the power outlet.

Find your **Power Plug** on your Wi-Fi network list devices.

Click **Connect** directly to the **Pacific_Sun_Power Plug_Module** Wi-Fi Network.

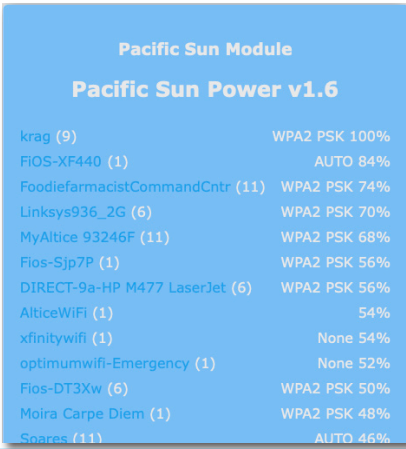

9

New window **Pacific Sun Power Module** will automatically Pop Up:

Click:

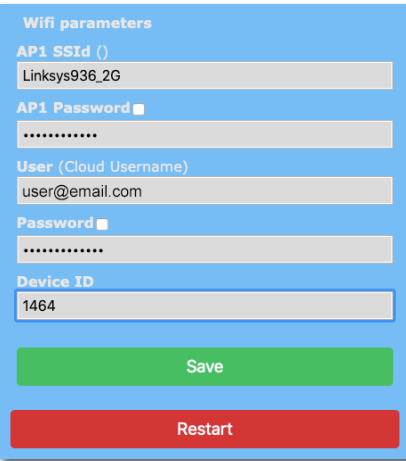

1 Scan for wifi networks

10

Connect Power Module to your **Home WiFi** network:

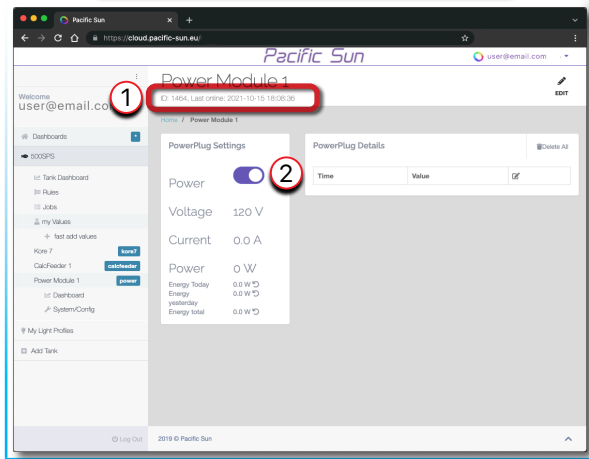

Select your **Home WiFi** network under the Network list.

11

Connect Power Module to **Home WiFi** network and **PS Cloud**:

- 1 Your **Home WiFi** network
- 2 Type in your **Home WiFi** network password
- 3 Type in your **Cloud Username**
- 4 Type in your **Cloud Username** password
- 5 Type in your **Cloud Device ID** **XXXX** from **step 7**
- 6 Next Click: Save

12

Now, under your **PS Cloud** user interface, you should see an active **Power Plug** device:

- 1 Last online
- 2 You can test the device by clicking the **Power ON/OFF** button
